Mr. Brian Trower
Assistant Director – Electric Department
Ames Municipal Electric System
502 Carroll Avenue
Ames, Iowa 50010

Subject: 2018-2019 Annual Groundwater Monitoring and Corrective Action Report
Coal Combustion Residuals (CCR) Inactive Surface Impoundment

Dear Mr. Trower

On behalf of the City of Ames Municipal Electric System, SCS Engineers (SCS) is submitting this 2018-2019 Annual Groundwater Monitoring and Corrective Action Report for the Ames Municipal Electric System Inactive Coal Combustion Residuals (CCR) Surface Impoundment (Impoundment).

If you have any questions regarding this document, please contact the undersigned.

Sincerely,

Christine L. Collier, P.E.

1.0 INTRODUCTION

This 2018-2019 Annual Groundwater Monitoring and Corrective Action Report was prepared to support compliance with the groundwater monitoring requirements of the “Coal Combustion Residuals (CCR) Final Rule” (Rule) published by the United States Environmental Protection Agency (USEPA) on April 17, 2015, with an update published August 5, 2016, to provide an extension of compliance deadlines for certain inactive surface impoundments. The City of Ames Municipal Electric System CCR Ash Impoundment (Impoundment) is classified as an “inactive” CCR unit and is therefore regulated by the August 5, 2016 update to the Rule subject to the new language of 40 CFR 257.100(e). Owners and operators of inactive CCR surface impoundments subject to the provisions of the new 40 CFR 257.100(e)(5)(ii) are required to prepare an annual groundwater monitoring and corrective action report no later than August 1, 2019 per 40 CFR 257.90(e).

Specifically, this report was prepared to fulfill the requirements of 40 CFR 257.90(e). Changes to the text of 40 CFR 257.90(e) based on the new 40 CFR 257.100(e) are shown in [brackets]. The applicable sections of the Rule are provided below in italics, followed by applicable information relative to the 2018-2019 Annual Groundwater Monitoring and Corrective Action Report for the City of Ames Municipal Electric System Inactive CCR Ash Impoundment.

2.0 §257.90(E) ANNUAL REPORT REQUIREMENTS

Annual groundwater monitoring and corrective action report For [inactive] CCR surface impoundments, no later than [August 1, 2019], and annually thereafter, the owner or operator must prepare an annual groundwater monitoring and corrective action report. For [inactive] CCR surface impoundments, the owner or operator must prepare the initial annual groundwater monitoring and corrective action report no later than [August 1] of the year following the calendar year a groundwater monitoring system has been established for such CCR unit as required by this subpart, and annually thereafter. For the preceding calendar year, the annual report must document the status of the groundwater monitoring and corrective action program for the CCR unit, summarize key actions completed, describe any problems encountered, discuss actions to resolve the problems, and project key activities for the upcoming year. For purposes of this section, the owner or operator has prepared the annual report when the report is placed in the facility’s operating record as required by §257.105(h)(1). At a minimum, the annual groundwater monitoring and corrective action report must contain the following information, to the extent available:

2.1 §257.90(e)(1) SITE MAP

A map, aerial image, or diagram showing the CCR unit and all background (or upgradient) and downgradient monitoring wells, to include the well identification numbers, that are part of the groundwater monitoring program for the CCR unit;

A site map with an aerial image showing the Impoundment and all background (or upgradient) and downgradient monitoring wells with identification numbers for the Impoundment groundwater monitoring program is provided as **Figure 1 in Appendix A**.

2.2 §257.90(E)(2) MONITORING SYSTEM CHANGES

Identification of any monitoring wells that were installed or decommissioned during the preceding year, along with a narrative description of why those actions were taken;

The Impoundment groundwater monitoring system was initially certified on April 15, 2019. No other new monitoring wells were installed and no wells were decommissioned as part of the Impoundment groundwater monitoring program for the Impoundment in this reporting period.

2.3 §257.90(E)(3) SUMMARY OF SAMPLING EVENTS

In addition to all the monitoring data obtained under §§ 257.90 through 257.98, a summary including the number of groundwater samples that were collected for analysis for each background and downgradient well, the dates the samples were collected, and whether the sample was required by the detection monitoring or assessment monitoring programs;

Eight background groundwater sampling events and the initial detection monitoring event were completed during the reporting period. Background sampling began on August 1, 2018. Background samples were analyzed for the Appendix III and Appendix IV monitoring constituents specified in both 40 CFR 257 and in Table 3 of the April 16, 2019 City of Ames CCR Groundwater Monitoring Sampling and Analysis Program report. Detection monitoring samples were analyzed for only the Appendix III monitoring constituents. During the April 12, 2019 first detection monitoring event, an additional background Appendix IV sample was collected, which increased the available Appendix IV background data. An analytical summary table is included in **Appendix B Table 1**. The field data is summarized in **Appendix B Table 2**. The dates of sample collection and the results of the analyses are also provided in these tables.

2.4 §257.90(e)(4) MONITORING TRANSITION NARRATIVE

A narrative discussion of any transition between monitoring programs (e.g., the date and circumstances for transitioning from detection monitoring to assessment monitoring in addition to identifying the constituent(s) detected at a statistically significant increase over background levels); and

There was no transition from detection monitoring to assessment monitoring in 2018-2019. Only detection monitoring was conducted in 2018-2019. Statistical evaluation of the data was still in progress as of July 31, 2019.

2.5 §257.90(E)(5) OTHER REQUIREMENTS

Other information required to be included in the annual report as specified in §§ 257.90 through 257.98.

A summary of potentially required information and the corresponding section of the Rule is provided in the following sections. In addition, the information, if applicable, is provided.

2.5.1 §257.90(e)

...For the preceding calendar year, the annual report must document the status of the groundwater monitoring and corrective action program for the CCR unit, summarize key actions completed, describe any problems encountered, discuss actions to resolve the problems, and project key activities for the upcoming year...

Status of Groundwater Monitoring and Corrective Action Program.

The groundwater monitoring and corrective action program is currently in detection monitoring.

Summary of Key Actions Completed.

Collection of initial background groundwater quality data was completed in March of 2019 and the initial detection monitoring sampling was completed on April 12, 2019. Laboratory analysis of the April 12, 2019 sample was completed in June of 2019. Statistical evaluation of the detection monitoring results is in progress.

Description of Any Problems Encountered.

No noteworthy problems were reported associated with the collection or analysis of groundwater samples over the reporting period.

Discussion of Actions to Resolve the Problems.

Not applicable because no noteworthy problems were encountered.

Projection of Key Activities for the Upcoming Year (August 2019- July 2020).

Completion of verification sampling and statistical evaluation of the Spring 2019 detection monitoring data. Semiannual Fall 2019 and Semiannual Spring 2020 groundwater sampling and analysis and, if required, alternative source demonstration(s).

2.5.2 §257.94(d)(3)

Demonstration providing the basis for an alternative monitoring frequency for detection monitoring and certification that it meets the requirements of this section.

Not applicable because no alternative monitoring frequency for detection monitoring and certification was pursued.

2.5.3 §257.94(e)(2)

Demonstration that an alternative source other than the CCR unit caused the statistically significant increase (SSI) over background or that the SSI was caused by an error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality. In addition, certification of the demonstration is to be included in the annual report.

Not applicable because no such demonstration was warranted.

2.5.4 §257.95(c)(3)

Demonstration providing the basis for an alternative monitoring frequency for assessment monitoring and certification that it meets the requirements of this section.

Not applicable.

2.5.5 §257.95(d)(3)

Include the concentrations of Appendix III and detected Appendix IV constituents from the assessment monitoring, the established background concentrations, and the established groundwater protection standards.

Not applicable because there was no assessment monitoring required.

2.5.6 §257.95(g)(3)(ii)

Demonstration that an alternative source other than the CCR unit caused the contamination, or that the SSI (during assessment monitoring) resulted from an error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality. In addition, certification of the demonstration is to be included in the annual report.

Not applicable because no such demonstration was warranted.

2.5.7 §257.96(a)

Demonstration of the need for additional time to complete the assessment of corrective measures due to site-specific conditions or circumstances. In addition, certification of the demonstration is to be included in the annual report.

Not applicable because no such demonstration was warranted.

3.0 GENERAL COMMENTS

This report has been prepared and reviewed under the direction of a qualified groundwater scientist and qualified professional engineer. The information contained in this report is a reflection of the conditions encountered at the City of Ames Municipal Electric System Inactive CCR Surface Impoundment at the time of fieldwork. This report includes a review and compilation of the required information and does not reflect any variations of the subsurface, which may occur between sampling locations. Actual subsurface conditions may vary and the extent of such variations may not become evident without further investigation.

Conclusions drawn by others from the result of this work should recognize the limitation of the methods used. Please note that SCS Engineers does not warrant the work of regulatory agencies or other third parties supplying information used in the assimilation of this report. This report is prepared in accordance with generally accepted environmental engineering and geological practices, within the constraints of the client's directives. It is intended for the exclusive use of the City of Ames Municipal Electric Systems for specific application to the Inactive CCR Surface Impoundment. No warranties, express or implied, are intended or made.
